

New Product Announcement

Compact Incubator *from* Nelson-Jameson

Before you buy another expensive incubator for expanding your environmental or ingredient testing, consider this cost-effective alternative.

Economically priced, this compact incubator will hold approximately 40 Petrifilm™ Plates and a horizontal certified incubator thermometer. An adapter (available separately from Radio Shack) also permits use with a dashboard plug-in, ideal when taking samples away from the plant.

This incubator has been widely recommended by Pfizer Animal Health for use with the Hymast Test for on-farm culturing of mastitis pathogens. Made from a converted Rubbermaid cooler and wired with a reliable thermostat for stable temperature control, it includes a fuse, over-temperature cutout switch and external dial thermometer.

Compact Incubator

#004-3100

Certified Incubator Thermometer

#195-3032

Now serving you from three locations:

Marshfield, Wisconsin
Turlock, California
Twin Falls, Idaho
